Warnings - BNA F

Session Expired

he system integrates an inactivity monitoring function that is active throughout all operational phases, except for withdrawal procedures. If there is no interaction for 60 seconds, an alert screen will appear. If you confirm with "Yes," the machine will resume the cycle exactly where it was interrupted; otherwise, the system will automatically return to the **home page.** If inactivity occurs during a deposit session, the machine will print a receipt with the total deposited up to that point.

Reject Slot

Heavily worn, damaged or soiled banknotes may not be recognized as authentic and may be rejected by the acceptor. **Remove rejected notes** from the **Reject Slot** to continue your deposit or deposit. If the poor condition of the banknote prevents it from being validated by the acceptor, you can deposit it using a Safebag.

Ceilings

Close to the fund will update you on the limits on the remaining amount and/or how many banknotes you have still allowed to deposit. Make sure you do not deposit banknotes that exceed, in number or amount, that indicated on the monitor.

Once a maximum limit is reached, the BNA safe will notify you that the intervention of the cash transport service is required. Touching "OK" will end the deposit session and print a receipt for the amount deposited in the BNA safe.

From this moment the cash register will remain out of service until the transport of valuables will not intervene to replace the bag.
