

Jam

Deposit Jam

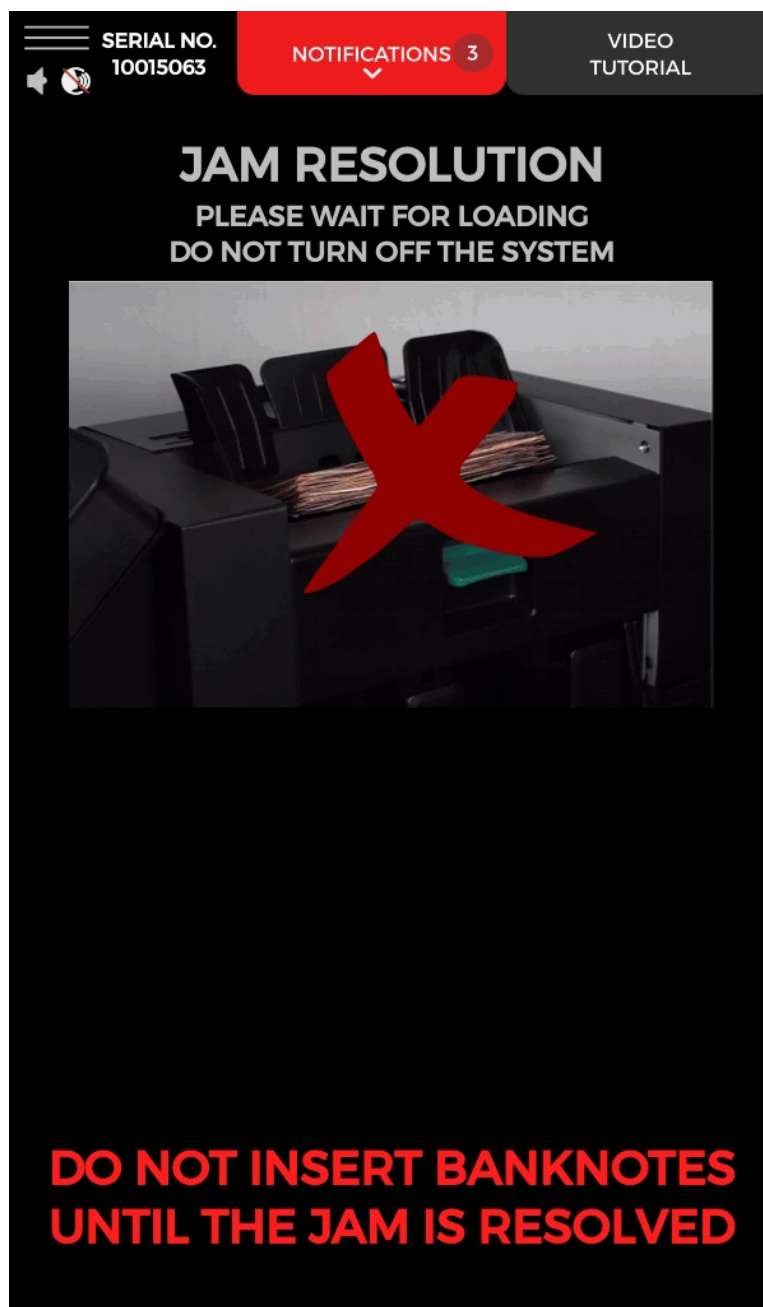

If a jam occurs during a deposit, the voice prompt will prompt you to Remove any banknotes still stuck inside the acceptor, displaying a video showing how to retrieve them.

Once all the banknotes have been removed and the acceptor slots are closed, select the "**CONTINUE**" button to return the smart safe to operation and continue with the deposit.

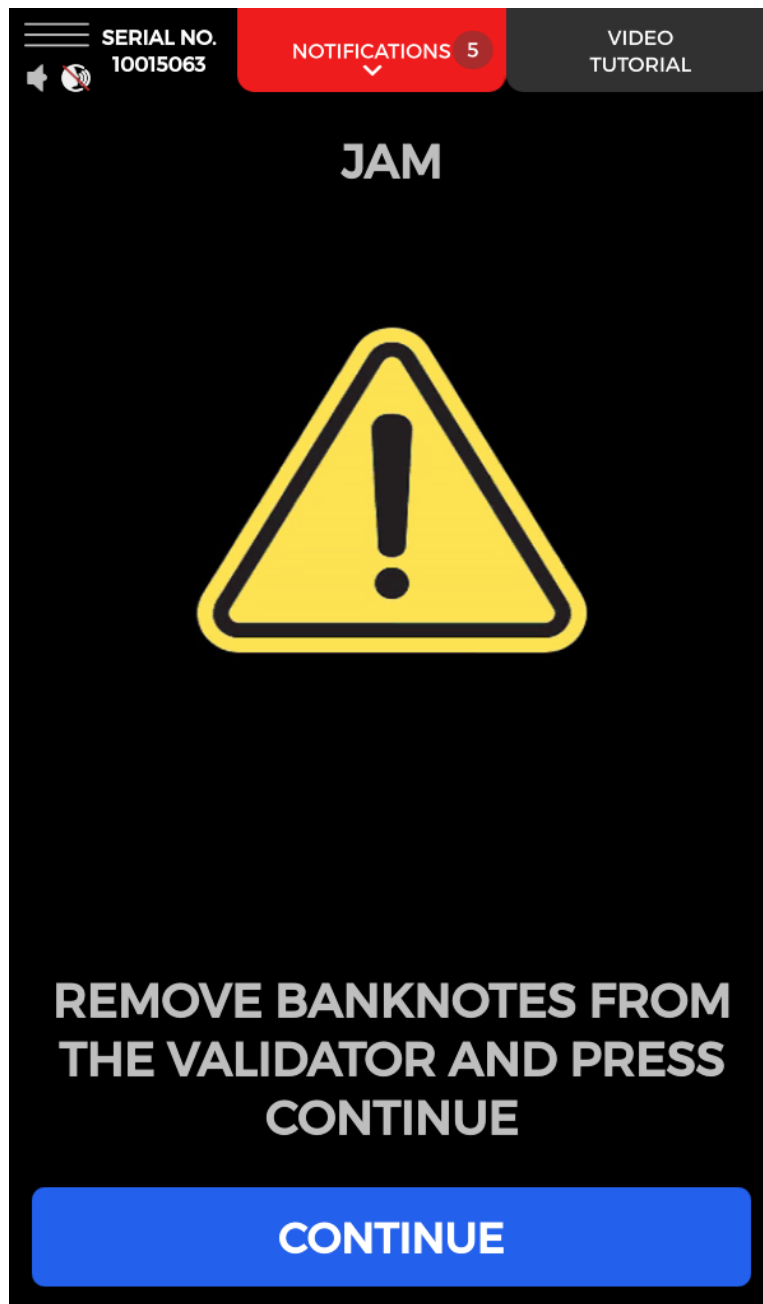

Jam Clearing

During the jam clearing procedure, it is necessary to avoid inserting banknotes until the jam is completely cleared. You must also wait for the loading process to finish, and absolutely avoid turning off the system to avoid compromising the recovery process.

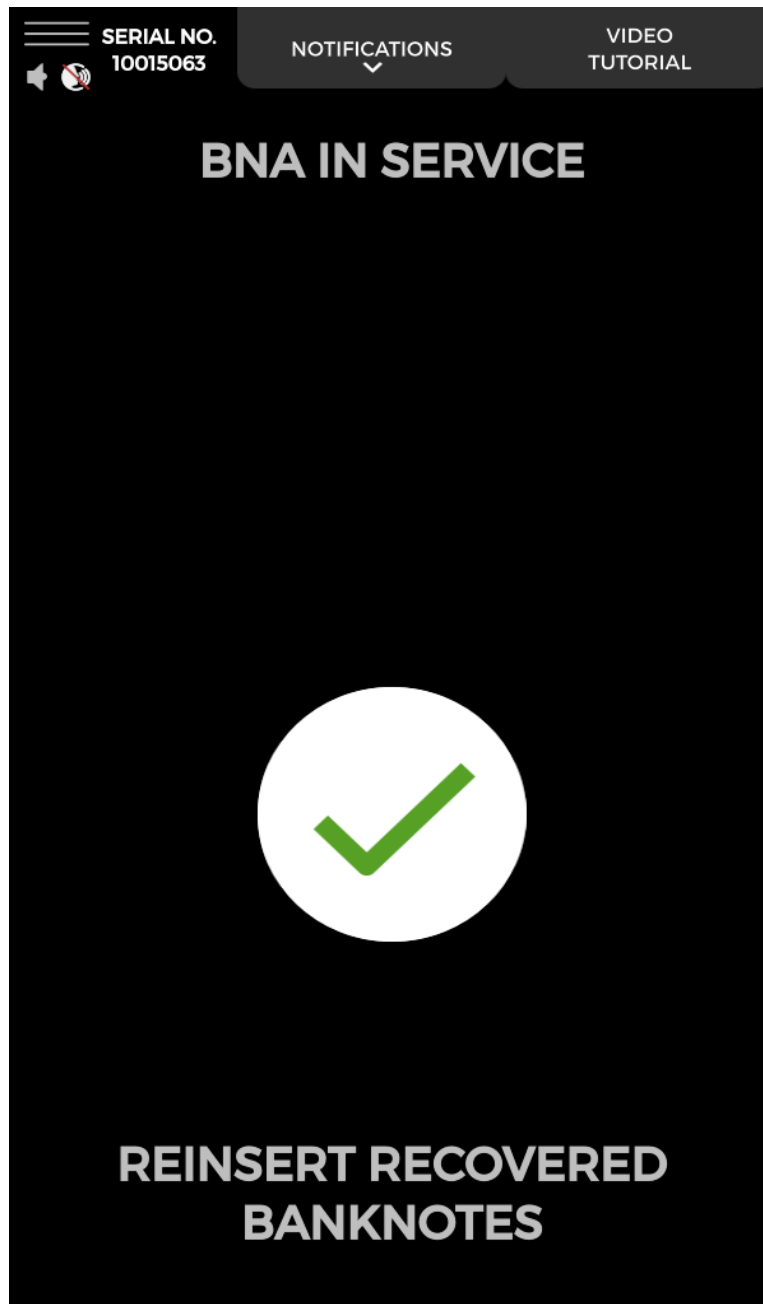

Continuous jam

If the problem is not resolved, carefully recheck all compartments and press "CONTINUE" again. If the problem persists, see page [Jam Unresolved tab](#). Otherwise, continue below.

BNA OPERATIVE

Once all the banknotes have been removed and the "CONTINUE" button has been pressed, the smart safe will restart. If the procedure is successful, the BNA OPERATIVE screen will appear.

Deposit completion

When you have finished depositing your assets, tap "COMPLETE DEPOSIT."
