Costumer's Card Management - BNA F

Card Management

By selecting the dedicated button in the main menu, the operator accesses the section for managing deposit cards. Within this interface, the system offers two distinct operational functions:

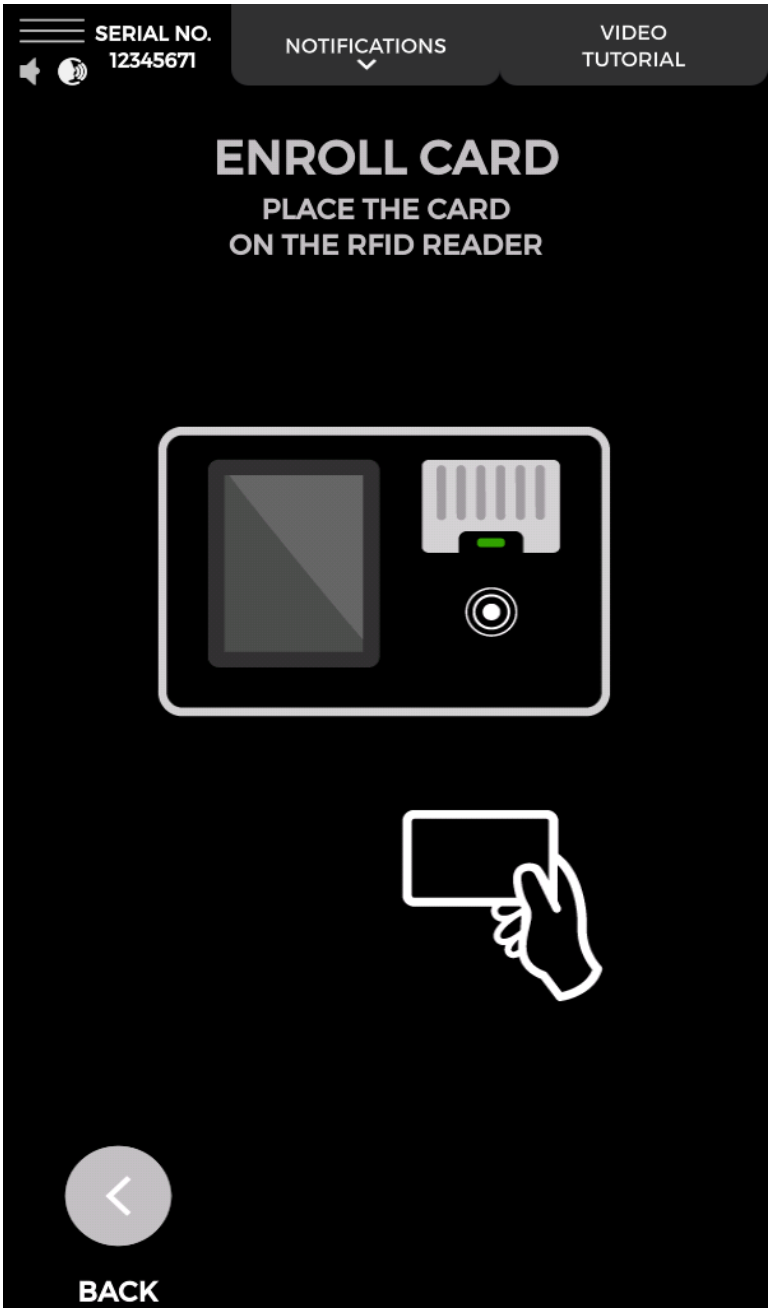

- Register new card
- Delete card

Back - Return to **Supervisor Menu.**

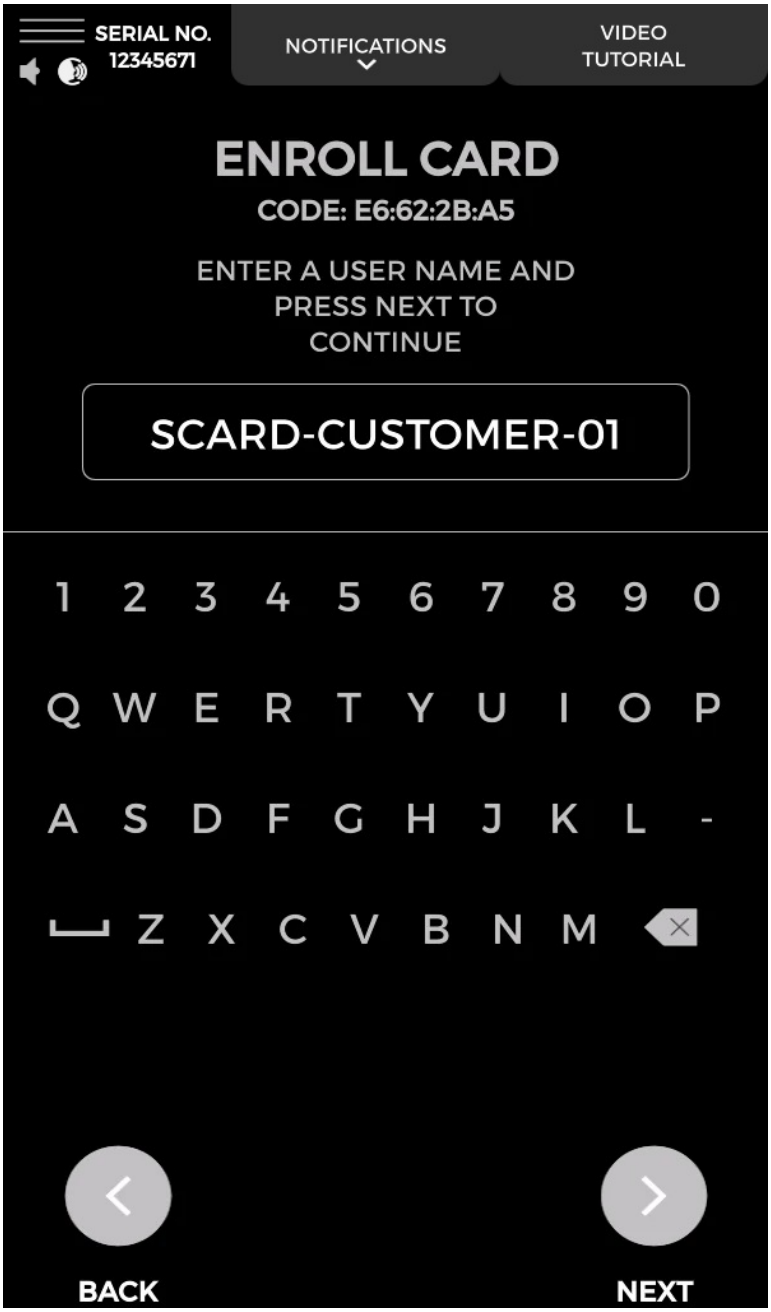

Registering new cards

By selecting the "Register new card" option, the terminal starts the setup wizard and displays a graphic screen prompting the user to physically place the card against the machine's integrated RFID reader.

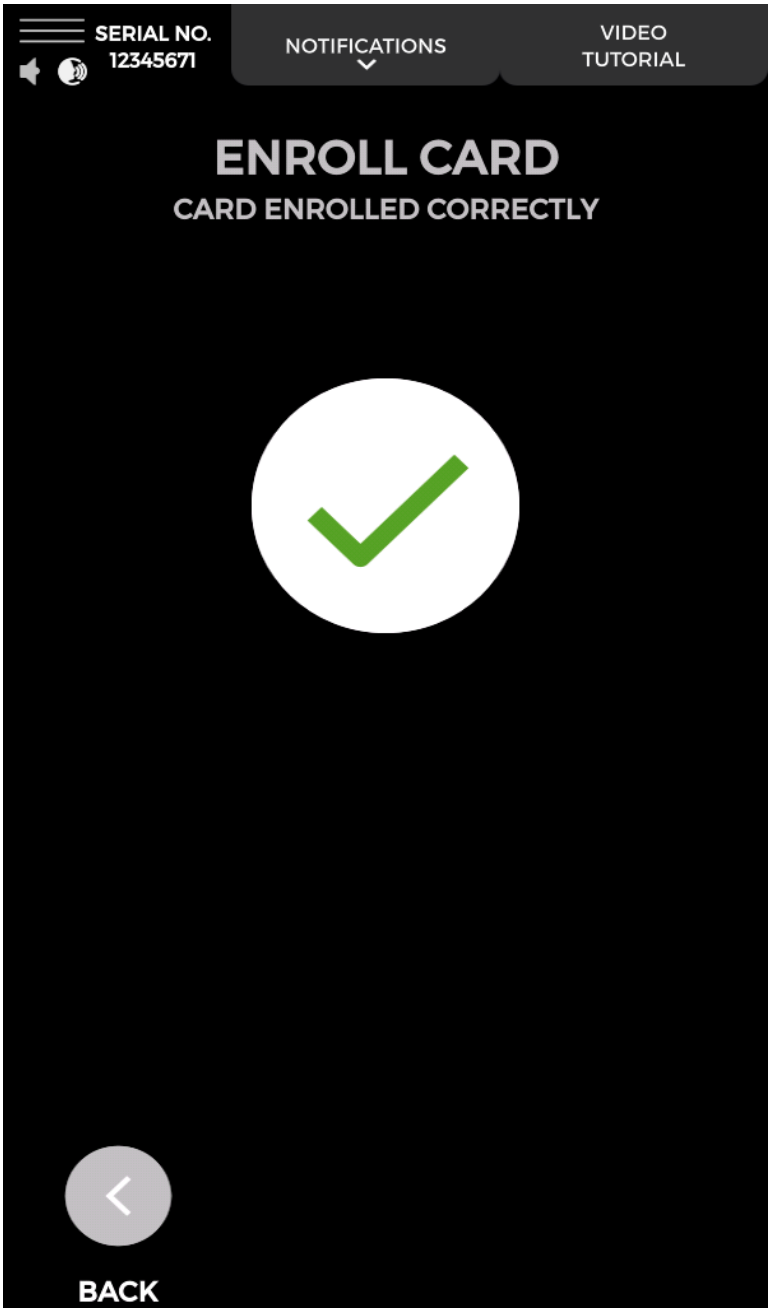

Register User Name

As soon as the card is detected, the interface automatically updates to show an on-screen keyboard. At this stage, the card can be linked to a specific user; the supervisor can then type the desired name or description into the text field and press the "Next" button to confirm the data.

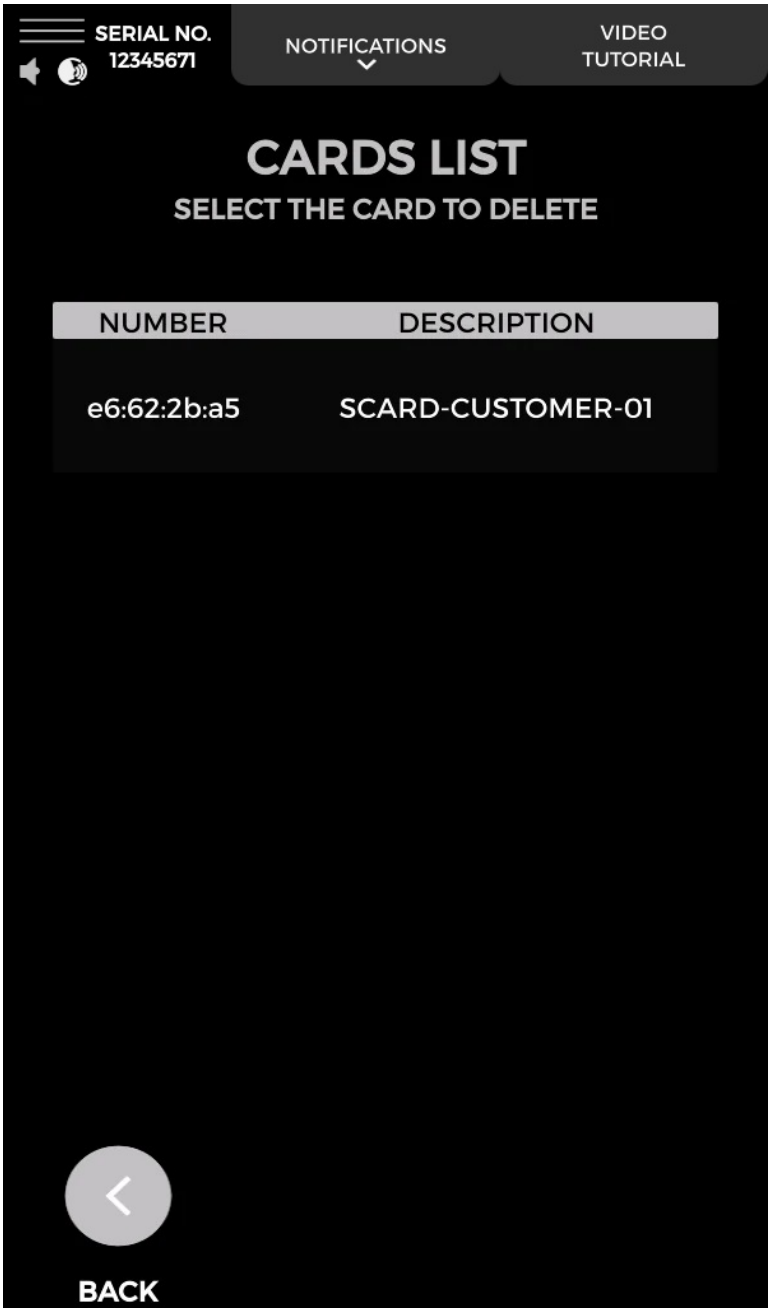

Card successfully registered

If the operation is successful, a green checkmark icon appears on the display within the "CARD SUCCESSFULLY REGISTERED" notification screen, confirming that the data has been permanently saved.

Delete Card

By selecting the "Delete Card" option, the terminal displays a real-time list of all stored cards. To remove one, simply tap it directly on the screen. Note: This list shows only cards registered locally via the terminal; cards registered through the Chronos portal are not visible on this screen.
